

Box Nut

A self-retaining nut solution providing high strength performance, ergonomic friendly installation, and accommodating of a wide panel range

High Strength

Achieves performance through the multi-threaded barrel extrusion and excellent retention via expanding legs.

Ergonomic Installation

Installs with a single push at 45N (10 LBF) MAX. Automation compatible.

Enables Lightweighting

Achieves ~50% weight reduction over a cold formed nut while offering same strength properties.

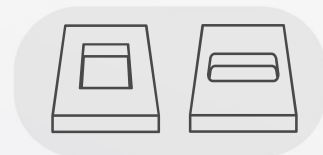

Fastener Standardization

Accommodates a range of panel thicknesses and material types.

Visible Pre-Assembly

Installs and retains in panel prior to final assembly.

Installs into Square or Rectangular Hole

Ideal Applications:

Instrument Panel

Pillars

Center Console

Door Panel & Mechanism
